UNIVERSITY OF QUEENSLAND Multi Campus Wireless

THE CLIENT

The University of Queensland (UQ) is one of Australia's premier learning and research institutions. It is the oldest university in Queensland and has produced generations of graduates who have gone on to become leaders in all areas of society and industry.

The University is a founding member of the national Group of Eight, an alliance of research-strong "sandstone" universities committed to ensuring that Australia has higher education institutions which are genuinely world class.

THE CHALLENGE

UQ is a public university with many students across a broad range of campuses. There are 774 buildings covering 470,979 m² and holding 1955 teaching rooms and laboratories. They also have over 18,000 computers on site.

Students and staff are increasingly utilising modern technologies to access teaching and learning resources. A key driver is their interest in being able to access wireless networks in outdoor as well as indoor spaces within the campuses.

THE SOLUTION

CBO Telecommunications was commissioned by Cisco to conduct an 802.11n wireless LAN site survey and network design at UQ's campuses. The resultant bill of materials was for 3,500 wireless access points:

- 3,400 Cisco 1142n Wireless Access Points
- 100 Cisco 1252n external Wireless Access Points

CBO was contracted for the installation of the Outdoor Wireless MESH at UQ's campuses located at St Lucia, Ipswich, Gatton and the School of Dentistry in Brisbane.

UQ will use the coverage for data, with plans to use laptops, iPhones and devices such as parking meters and network clients.

RESULTS

The work at UQ commenced in November 2009 and has resulted in positive feedback from students and faculty alike.

"I would like to thank all for their ongoing support to the project. I would like to highlight that CBO are doing work above and beyond the agreed scope to deliver the project on time."
