

CAPABILITY STATEMENT

ANYWARE TO EVERYWHERE

CBO Telecommunications (CBO) has a diverse team of full time employees who are highly skilled in their fields. Together with our specialist contractors who extend our reach across Australasia the CBO Team have been leaders in the industry since its inception in 2002.

CBO provides robust and cost-effective communication solutions to mining locations in some of the most remote parts of Australia.

CBO'S CORE COMPETENCY

MANUFACTURING & DESIGN

CBO develops rapidly deployable mobility solutions in the harshest of environments that are manufactured in Australia to meet or exceed industry expectations both locally and internationally.

Whether the challenge is performance, scale, remoteness or environmental, we have a solution and technology to help your organisation keep in touch.

THE CBO STRUCTURE

CLIENTS

CBO Telecommunications believes that our success emerges from your success. We establish a standardised commercial engagement, no matter the location. Proactive account management is central to how we engage with our clients, providing both transparency and accountability and building strong relationships through integrity. We make realistic promises and strive to exceed expectations.

CBO provides a single point of contact for our client's management and team, allowing clear communication and direct lines of responsibility. We also provide contact points with CBO Management for escalation of any concerns, enabling prompt resolutions.

ENGAGING WITH OUR FUTURE

CAPABILITIES

CBO designs and builds a range of wireless telecommunications solutions that meet the unique needs of our clients, whether that is a government department in a state capital or a private company in the remote outback.

We choose the best-of-breed solutions from a range of technologies including:

- Mobile network Infrastructure design and construction
- Auto Acquire VSAT trailers
- Mine spec solar trailers and skids
- 33m skid-mounted masts, and
- Mast solutions for industrial and mining environments.

CBO CAPABILITY OVERVIEW

Solar Mobility Trailers

CBO's designed and manufactured "The Edge" Solar Mobility Trailer solution allows effective mobile communication without the traditional compromises on functionality.

"The Edge" Solar Mobility Trailer is a network extension trailer solution for circumstances when there is no power onsite. With no fixed structures or trenches, this repeater trailer is a rapidly deployed unit that supports a wide range of network equipment including Wi-Fi hotspot, point-to-point Microwave, point-to-multipoint Microwave, and CCTV.

"The Edge" Solar Mobility Trailer has been designed to withstand the most rugged environments with minimal impact to its surroundings and is robust and portable making it easy to relocate.

VSAT Trailers

CBO has developed "The Edge" VSAT Trailer for clients who require an effective mobile communications solution for situations where connectivity is required for a short period of time.

"The Edge" VSAT Trailer is an integrated trailer solution that provides network connectivity via the auto-acquire VSAT system. This system enables an independent and secure satellite link to be established within minutes and can create an office like environment in any location.

With WAN optimisation, users can access email, internet, intranet and shared document drives fast, securely and reliably without the need for local servers at the remote site.

The design and construction of "The Edge" VSAT Trailer enables it to withstand the most extreme Australian environments with little impact to its surroundings.

33m Tower Skids and Mobile Platforms

Our CBO designed and manufactured "The Edge" Mobile 33m Tower Skids and Mobile Skid Platforms are an ideal solution where the cost of building fixed infrastructure is prohibitive for short term projects or site access is limited. It supports a range of communications equipment such as MESH and microwave links, CCTV, P25 or TETRA radio equipment and RADAR.

"The Edge" Mobile 33m Tower Skids features a telescopic tri-truss tower mast that when fully deployed the mast is 33m in height and can be fitted with a diesel powered full air-conditioned communications enclosure for the most complex of solutions.

This rapidly deployable standalone communications solutions can be transported by a C-130 plane and to site via a tilt-tray tow truck and has a minimal environmental impact as the platform requires no substantial earthworks for installation or relocation.

COMMITMENT TO MAINTAINING STANDARDS

With certifications in the following areas, CBO are committed to maintaining our Integrated Management System that encompasses all facets of our company.

ISO 9001	Quality Management System
ISO14001	Environmental Management System
ISO45001	Occupational Health and Safety Management System

REGIONAL AND MINING EXPERIENCE

With more than 15 years of experience, CBO Telecommunications are the trusted partner for providing rapidly deployable mobility solutions for the Australian mining and resources industry as well as other private and public-sector organisations nationwide.

Our proven track record and extensive regional and mining industry experience provides certainty that a build will be delivered, on time and on budget, no matter how remote the location

We collaborate with global blue-chip mining companies, to deliver robust communication solutions for the mining and resources sector in some of the most remote and demanding areas of Australia and the Asia-Pacific region. We also work with community organisations, higher education providers and local, state and federal government departments that are active in regional parts of the nation.

CBO's successful track record with the resources sector distinguishes the company as a leading solutions provider of reliable communications that protects the longevity of our clients' investments in critical infrastructure.

CONNECT WITH US TODAY

Together with our clients, CBO delivers innovative solutions that are executed with high standards of quality, safety and environmental performance on time and within budget.

We are responsive to the client's needs and the market conditions and are ready to build at a moment's notice.

Flexible in our approach, CBO can take the worry out of your communication challenges so that you can concentrate on your core business.

We invite you to review our past performance and we welcome you to meet our growing team of committed individuals.
